

1. What are the different methods to call a function in R?

- 1) Calling a function without an argument
- 2) Calling a function with argument values (by position and by name)
- 3) Calling a function with default argument

2. The lazy evaluation of a function means, the argument is evaluated only if it is evaluated only if it is used inside the body of the function. Say True or False.

True.

3. 3. State True or False:

a. Insights driven from descriptive analytics is not meaningful.

False

b. The number of values in each Elements of a list, should be equal.

False

c. The datasets are not stored in memory of the computer using R.

False

d. Data frames and matrices are two dimensional however the array is multidimensional.

True
